

CHRISTOPHER MONNAT

Alexandria, VA | 585-355-6495 | chris@monnat.org | linkedin.com/in/chrismonnat

CHIEF TECHNOLOGY OFFICER

Hands-on CTO who came up through architecture and never left the code. Owns technology end to end today for an AI consulting practice, building agentic and LLM-backed products for enterprise clients while setting strategy, delivery, and the senior teams that ship them. Turns a lean team into a shipping machine: at Pipeline 360 delivered a revenue-critical, multi-tenant platform on AWS from zero to production in under 90 days, protecting an 8-figure revenue line, and at Industry Dive scaled one team of 8 into five cross-functional teams of 40+ serving 100+ properties used by millions. Drove AI-native development across an 800+ employee org, turning loose scripts into an evaluated, guardrailed platform teams trusted. Known for the player-coach seam, closing the gap from AI strategy to secure, production software without letting reliability or craft slip.

SIGNATURE ACHIEVEMENTS

- ✓ AI-Native at the Code: Build agentic and LLM-backed systems for enterprise clients hands-on while owning strategy and delivery, designing AI-native architecture that lets a lean team ship continuously.
- ✓ Platform Zero to Production: Delivered a revenue-critical, multi-tenant platform on AWS from zero to production in under 90 days, protecting an 8-figure line without loosening reliability or security.
- ✓ Modernization End to End: Replaced manual ticket queues with self-service provisioning and automated CI/CD, then set the testing, QA, and release standards that cut time-to-ship 35% across a 40-plus engineering org.
- ✓ Scaled Team and Standards: Grew 1 team of 8 into 5 cross-functional teams of 40+ across time zones, standing up SRE, observability, and incident response that held uptime through rapid change.

WORK EXPERIENCE

DUAL LOGIC, REMOTE | 2026

Chief Technology Officer & Managing Partner

Lead the technical side of a full-service AI consulting firm, owning technical vision, architecture, and delivery from discovery through production for enterprise clients.

- Own technology end to end for enterprise clients as a player-coach: build agentic workflows and LLM-backed systems at the code level, turning client AI strategy into working software across tool orchestration, RAG retrieval, and model deployment.
- Design AI-native architectures and development workflows that let lean teams ship continuously, standardizing reusable agent skills and DevSecOps-grade guardrails for output quality, hallucination control, and cost governance.
- Drove adoption of AI-forward development across an 800+ engineer SaaS org by turning one-off scripts into a shared, evaluated, guardrailed platform teams trusted.

- Advise CEOs and boards on technical strategy and an AI-native SDLC, translating ambiguous goals into phased, security-first roadmaps they can fund and defend.

PIPELINE 360, REMOTE | 2025-2026

Sr. Vice President, Technology

Owned technology strategy, platform architecture, and delivery across product, engineering, data, IT, security, and compliance for a newly independent, PE-backed, 100% remote org of 100+.

- Owned technology strategy and architecture for cloud-native, multi-tenant, data-driven systems on AWS, Kubernetes, and PostgreSQL, setting standards across application, data, and platform layers to raise velocity while hardening availability and security.
- Delivered a revenue-critical, multi-tenant platform from zero to production in under 90 days on AWS, protecting an 8-figure revenue line through a post-divestiture reset.
- Established modern engineering practices through architecture reviews, automated CI/CD, observability, incident response, and configuration-as-code, moving teams to self-service provisioning instead of ticket queues.
- Kept the platform secure and compliant through major technical change, owning security, IT, and compliance and serving as the sole technology voice in PE investor and board diligence.

INDUSTRY DIVE / INFORMA TECHTARGET, WASHINGTON, DC | 2018-2025

VP, Engineering

Founded and scaled the Brand & Content platform and delivery engineering organization through post-acquisition integration.

- Grew 1 team of 8 into 5 cross-functional teams of 40+ across time zones, owning shared platform and product services for a multi-tenant SaaS serving 100+ properties used by millions.
- Matured SRE and modern SDLC across 100+ properties through observability, incident management, and automated CI/CD on AWS and Kubernetes, improving uptime and developer experience.
- Built a paved-road delivery model where automated provisioning and testing cut average time-to-ship 35%, then spread the pattern across the broader portfolio.
- Shipped an AI-driven lead-qualification system into the core product across web and mobile-responsive surfaces, pairing automated scoring with a human review loop to cut manual effort at scale.
- Built the Product Management function from zero and introduced career ladders and structured feedback, improving retention 15%.

PHONE2ACTION, ARLINGTON, VA | 2016-2017

VP, Engineering

Led engineering through Series-A growth, bringing planning, delivery, and on-call structure to a fast-scaling team.

- Stabilized a Series-A engineering org to consistent sprint predictability within 60 days by restructuring planning cadence and clarifying decision rights.
- Doubled the engineering team with no loss of release quality by instituting sprint-planning cadence, code-review gates, and a clear on-call rotation across web and mobile products.

EDUCATION

BS, Web Development, Information Technology | Morrisville State College, Morrisville NY

Member, Entrepreneurship Institute

AI Fundamentals | Masterclass

Teams Ops Practitioner | GitLab

Certified Agile Leader (CAL1) | Scrum Alliance

SKILLS

Platforms & Modernization: Multi-tenant SaaS, platform modernization, cloud architecture (AWS, GCP), distributed systems, REST APIs, CI/CD, DevOps, observability • **AI & Machine Learning:** AI-native development, applied AI, agentic workflows, LLM integrations, RAG, machine learning, prompt engineering, human-in-the-loop • **Engineering Standards & Quality:** Automated testing and QA/QC, release management, monitoring, incident response, SRE, secure SDLC, code review • **Security & Compliance:** Security-first architecture, information security, web application security, DevSecOps, compliance through change • **Leadership & Delivery:** Engineering leadership, hiring and mentoring senior teams, technology roadmap, agile delivery, board and executive communication • **Web, Mobile & App Development:** JavaScript (React, Next.js), Python, PHP, mobile delivery
